

# Natural Areas and Sensitive Habitats

Wild natural lands support wildlife, clean water, healthy soils, and a rich array of life in our diverse watershed. The Estuary Program and our partners work to protect, restore, and enhance habitat in the estuary and the lands that surround it. These efforts help to maintain open space, conserve water, prevent pollution, and maintain healthy habitats for wildlife and for people.

## HOW YOU CAN HELP

Help preserve natural areas for wildlife and plants. Keep dogs on leashes – dogs wandering off the trails can be stressful for wildlife. Pack it in, pack it out to leave natural areas as you found them.
